From: **We the Nuclear Free North**

Public Webinar on Wednesday in advance of February 4 Public Comment Deadline for NWMO's Deep Geological Repository Project

IGNACE – Feb. 4 at 11:59 pm will mark the end of the initial [30-day public comment period](#) on the Nuclear Waste Management Organization's Initial Project Description (IPD) for their Deep Geological Repository Project, as set by the federal Impact Assessment.

The Impact Assessment Agency of Canada's Project Page features links to the full [1,233-page IPD document](#), a [92-page IPD summary](#), a [comments made to date](#), and a [portal for submitting comments](#).

The Nuclear Waste Management Organization's plan to transport, process and bury all of Canada's nuclear fuel waste at a site between Ignace and Dryden in northwestern Ontario will include 50 years of transporting highly radioactive waste and 160 years of operation, and will leave in place 150,000 tonnes of the radioactive waste underground in the headwaters of the Wabigoon and Turtle-Rainy River watersheds.

The majority of comments to date, which now number over 150, have highlighted the need for transportation to be included in a full assessment including a public hearing, and concerns about negative impacts of the project.

We the Nuclear Free North (WTNFN) will offer the second of two webinars on Wednesday, Jan. 28, to assist members of the public who wish to make submissions during the current comment period. The Impact Assessment Agency of Canada (IAAC) also presented webinars earlier in the comment period and regional information sessions last week in Ignace, Sioux Lookout and Dryden.

"Wednesday's webinar will focus on comment preparation and submission, and will be especially useful for those who are preparing their comments," said Brennain Lloyd, Project Coordinator for Northwatch. "We'd like to amplify the IAAC's recommendation that commenters identify specific project impacts or gaps in the Initial Project Description that must be addressed in the review process. That being said, it's also perfectly appropriate to comment on the NWMO's proposed project as a whole."

"It's good to see many commenters pointing out that the Assessment would be incomplete without a comprehensive examination of how NWMO proposes to transport, transfer, and treat the high-level radioactive waste accumulated in southern Ontario and eastern Canada in the context of a full assessment with a public hearing," said Wendy O'Connor, a volunteer with
