

On September 18th, a Notice was posted in the Canada Gazette that the Nuclear Waste Management Organization's (NWMO's) Deep Geological Repository (DGR) project is proposed for designation as a "Project of National Interest" under the Building Canada Act. This designation would guarantee project approval, circumventing the Impact Assessment process now underway.

I am writing to object to designating NWMO's plan to transport, process, bury and abandon all of Canada's high-level waste at the Revell site in northern Ontario as a project to be listed under Schedule 1 of the Building Canada Act.

The NWMO's project must be the subject of a full public review, including a public hearing. The review must include long-term safety issues – which go well beyond the 160 years referenced in the Notice – and long-distance transportation (not limited to the immediate project area, as described in the Notice).

Respect Canadians. Respect Indigenous people. Respect Canadian law.

Do not exempt the Nuclear Waste Management Organization's radioactive waste transportation and burial project from a full review under the Impact Assessment Act by designating it as a "Project of National Interest" and adding it to Schedule I of the Build Canada Act.

Thank you for your consideration. Please reply to my concerns.

Toxic. Radioactive. Forever.
